

PERFORMANCE PROPERTIES

Nofia HM1100, HM9000 & HM7000

DESCRIPTION

Nofia HM1100, HM9000 & HM7000 have an exceptionally high limiting oxygen index, which makes them particularly well suited to be used as an FR additive. These materials are transparent polymers with a glass transition temperature of about 105°C and cover a wide range of melt flow.

BENEFITS AND FEATURES

- Transparent
- Non-halogenated
- Non-corrosive and non-migrating
- High melt flow
- High limiting oxygen index (LOI) – 60%

RESIN SYSTEMS

PET, PTT, PBT, PLA, PC, TPU, TPEE

PRODUCT APPLICATIONS

Fibers for carpet and textiles, foams, electronic connectors, wire and cable, transparent sheet products and blown films.

HANDLING AND USE

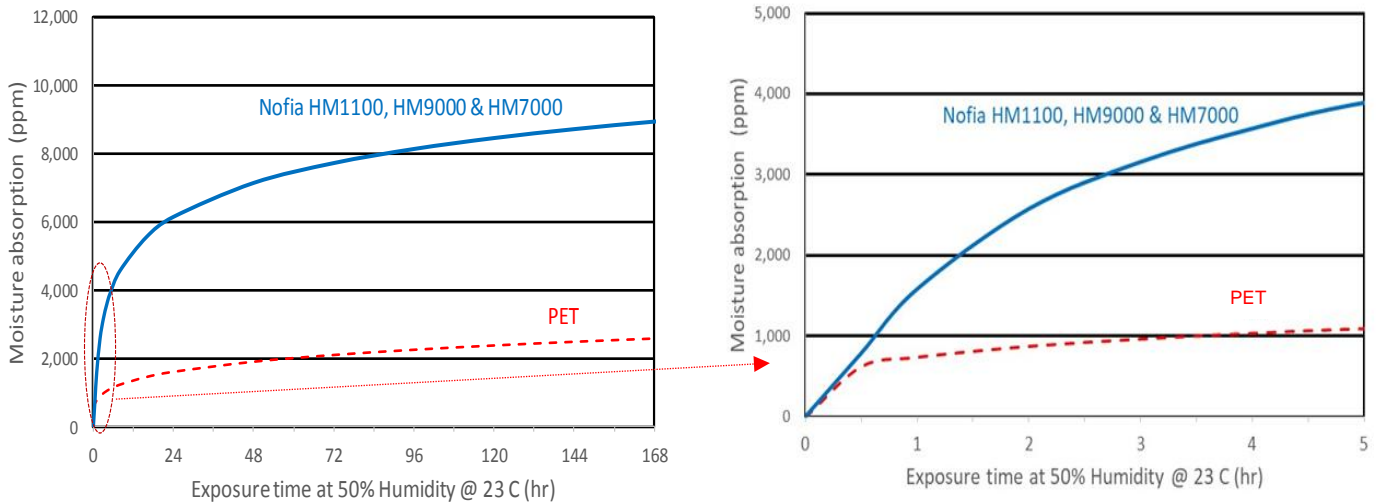

Nofia flame-retardants are considered non-hazardous materials when handled in accordance with standard industrial hygiene practices. Material Safety Data Sheets are available. You are encouraged to read and understand these documents before using the product.

DRYING CONDITIONS

Nofia phosphonates are hygroscopic materials and quickly absorb moisture from the atmosphere. The presence of moisture could hydrolyze the polymer in the melt phase at high temperature (e.g. > 220°C), reducing the molecular weight. Therefore, it is critical that the material is thoroughly dried prior to melt processing (<50 – 200 ppm moisture). For recommendations on drying, please refer to FRX Polymers' Technical Bulletin "Nofia Phosphonates Drying Recommendations".

Drying: 95°C for at least 6 Hours
 Desiccant dryer with dew point -40°C
 Max Moisture Content 0.02 wt%
